COREY HIOM

FULL-STACK .NET DEVELOPER

Swindon, Wiltshire | contact@coreyhiom.uk

PROFILE

Full-stack .NET developer with nine years of commercial experience building and maintaining web applications. My recent work includes .NET 8 and Blazor Server, SQL Server and front-end development. I also maintain older ASP.NET Web Forms and VB.NET systems, and have been rebuilding parts of a legacy CMS in Blazor. Used to tracking down bugs, working with existing code and deploying changes to live websites.

TECHNICAL SKILLS

Microsoft web stack: .NET 8, C#, ASP.NET Core (Blazor Server), ASP.NET Web Forms, .NET Framework, VB.NET, classic ASP

Front end: HTML5, CSS3, Sass/SCSS, Bootstrap 5, JavaScript, responsive interfaces, CMS-driven websites

Data & integration: SQL Server, SSMS, database design and queries, REST APIs, JSON, third-party integrations

Development & delivery: Git, Azure DevOps Repos/Boards/Pipelines, IIS, Windows Server, deployment and troubleshooting

PROFESSIONAL EXPERIENCE

Developer (Web Development & Technical Support) | Reuben Digital Ltd

Highworth, Swindon | October 2017 - Present

Started as an apprentice, balancing helpdesk support and development tasks, before moving into a permanent developer role. My work covers new features, updates to existing applications and support for live client websites.

- Develop .NET 8 / Blazor Server features using C#, dependency injection and SQL Server-backed services. Integrate external APIs and JavaScript components where needed.
- Maintain and update ASP.NET Web Forms/VB.NET, .NET Framework and classic ASP applications, fixing bugs and adding features while keeping existing functionality working.
- Build responsive pages and components with HTML, CSS/Sass, Bootstrap and JavaScript for client websites, CMSs and ecommerce sites.
- Write and troubleshoot SQL Server queries, stored procedures and data updates. Use SSMS to investigate data errors and slow queries.
- Use Git and Azure DevOps for source control, work items and build/release pipelines, with deployments through development, UAT and live IIS environments.
- Integrate and maintain third-party APIs for ecommerce, order processing and authentication.
- Reproduce and investigate defects using debugging tools, application logs and SQL Server data. Test fixes in development and UAT, then check they work after release.

COREY HIOM

FULL-STACK .NET DEVELOPER

Swindon, Wiltshire | contact@coreyhiom.uk

SELECTED DEVELOPMENT PROJECTS

Theatre Tokens | .NET 8, Blazor Server, C#, SQL Server, JavaScript, Bootstrap

- Built theatre and store searches with town/postcode and distance filters, pagination and Leaflet maps using OpenStreetMap geocoding.
- Built account and theatre-management pages for editing theatre details, uploading images and updating SQL Server records.
- Connected Blazor components, injected services and JavaScript interop to handle search results, filters and interactive maps.

In-house CMS v3 / visual page editor | Blazor, C#, SQL Server, JavaScript

- Built a visual page editor where users can drag and drop sections and content blocks, using Blazor components, JavaScript and SQL Server.
- Added preview, page versioning, publishing, restore and reusable content and media controls.
- Rebuilt modules from our older ASP.NET Web Forms CMS in Blazor, adapting them to work in the new CMS.

National Book Tokens and ecommerce sites | Blazor, SQL Server, ASP.NET, integrations

- Worked on a Blazor ecommerce platform with SQL Server-backed orders, customer accounts, delivery options and reusable website components.
- Maintained ecommerce and gift-card applications, investigating problems with orders, customer accounts, external integrations and live websites.
- Added features to newer Blazor sites while continuing to maintain the older ASP.NET applications used alongside them.
